

DETAILED DIAGNOSTICS

MULTIDIMENSIONAL CONSULTATION

Your treatment journey starts with a medical questionnaire and your Comprehensive Consultation. During this time, we explore your concerns, aspirations, underlying health, and lifestyle factors, which are then woven into your individual treatment prescription.

SIGNATURE EXAMINATION

Using a combination of techniques during each consultation, our medical and skin-health experts analyse the condition of your skin and multilayer facial structures. We methodically and scientifically examine from the foundations up, to better understand the health of your tissues and the underlying cause of your concerns, in order to accurately direct your treatment prescription.

MEDICAL PHOTOGRAPHY

This provides a greater range and depth of skin diagnostics than can be seen with the naked eye, and is used to grade your skin health. Ongoing analysis of your photos is used to monitor your regenerative progress, and recalibrate your plan as necessary.

AESTHETIC VISUALISATION

When appropriate, we use specialist ultrasound equipment to examine the deeper layers of your skin and the structures of your face. This unique technique gives us an even greater insight into what is going on beneath the surface, allowing us to plan treatments accordingly and assess your progress.
